Sequence 66, Application US/09370838

Patent No. 6444425

GENERAL INFORMATION:
APPLICANT: Red, Steven G.
APPLICANT: Mohamath, Roadoh
ITILE OF INVENTION: COMPOUNDS FOR THERAPY AND DIAGNOSIS OF TITLE OF INVENTION: COMPOUNDS FOR THERAPY AND DIAGNOSIS OF TITLE OF INVENTION: LUNG CANCER AND METHODS FOR THEIR USE FILE REFERENCE: 210121.47521
CURRENT APPLICATION NUMBER: US/09/370,838
CURRENT PILING DATE: 1999-08-09
RARLIER APPLICATION NUMBER: US 09/285,323
FRALIER FILING DATE: 1999-04-02
NUMBER OF SEQ ID NOS: 289
NUMBER OF SEQ ID NOS: 289
SOFTWARE: FastSEQ for Windows Version 3.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent NO. 5811536
GENERAL INFORMATION:
APPLICANT: Yanofsky, Martin F.
TITLE OF INVENTION: Cauliflower Floral Meristem Identify
TITLE OF INVENTION: Genes and Methods of Using Same
NUMBER OF SEQUENCES:
ADDRESSES: AADDRESS:
AADDRESSES: CAMBEDELI and Flores
STREET: 4370 La Jolla Village Drive, Suite 700
                                                         JOHNERAL INFORMATION, Rebecca E.
APPLICANT: Kinney, Tony
APPLICANT: Kinney, Tony
APPLICANT: Rafalski, Antoni
APPLICANTON: Plant Geranylgeranyl Transferases
FILE REFRENCE: BB1239 US NA DIV
CURRENT APPLICATION NUMBER: US/09/668,096
CURRENT FILING DATE: 1980-09-01
PRIOR PLING DATE: 1989-09-01
PRIOR PLING DATE: 1989-09-01
PRIOR FILING DATE: 1999-08-31
PRIOR FILING DATE: 1999-08-31
SOFTWARE: Microsoft Office 97

Sequence 1, Application US/09103840A

Patent No. 259432B

GENERAL INFORMATION:

APPLICANT: FLEISCHWAN, Robert D.

APPLICANT: WHITE, Owen R.

APPLICANT: VENTER, John C.

TITLE OF INVENTION: DNA SEQUENCES FOR STRAIN ANALYSIS IN MYCOBACTERIUM

TITLE OF INVENTION: TUBERCULGSIS

FILE REFERENCE: 24366-20007.00

CURRENT APPLICANTION NUMBER: US/09/103,840A

CURRENT FILING DATE: 1998-06-24

NUMBER OF SEQ ID NOS: 2

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 1

LENGTH: 4411529
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ArgalaAspSerSerGluGluLysArgHisArgLysArgLysLysHisHisArgGlyTyr 37

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

GENERAL INFORMATION:

APPLICANT: Prieto, P. A.

APPLICANT: Baxter, J. H.

APPLICANT: Cumming, R.D.

TITLE OF INVENTION: Product for Inhibition of Human Rotavirus Infection.

NUMBER OF SEQUENCES: 2

CORRESPONDENCE ADDRESS: 3

ADDRESSEE: Lonnie R. Drayer

ADDRESSEE: Abbott Laboratories

STREET: 625 Cleveland Avenue

CITY: Columbus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COUNTRY: United States

GENEAL INFORMATION:

TITLE OF INVENTION: Recombinant Fibrin Chains,

TITLE OF INVENTION: Fibrin and Fibrin-Homologs

NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:

ADDRESSES E. R. Squibb & Sons, Inc.

STREET: 100 Headquarters Park Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COUNTER READABLE FORM:

| Patent No. 6617156
| GENERAL INFORMATION:
| TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
| TITLE OF INVENTION: ENTERCOCCUS FARCALIS FOR DIAGNOSTICS AND THERAPEUTICS
| FILE REFERENCE: 032796-032
| CURRENT APPLICATION NUMBER: US/09/134,000C
| CURRENT FILING DATE: 1998-08-13
| PRIOR APPLICATION NUMBER: US 60/055,778
| PRIOR APPLICATION NUMBER: US 60/055,778
| NUMBER OF SEQ ID NOS: 6812
| SEQ ID NO 1868
| SEQ ID NO 1868
| LENGTH: 1509
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US-10-079-754A-10 (1-58) x US-09-134-000C-1868 (1-1509)
                                                                                                                                                                                                                              US-10-079-754A-10 (1-58) x US-09-543-681A-1164 (1-1062)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Sequence 200, Application US/10079623

Sublication No. US20020169302A1

GENERAL INFORMATION:

APPLICANT: Harvikala, 11kka J.

APPLICANT: Grigor, Murray R.

APPLICANT: Grigor, Murray R.

APPLICANT: Molenaar, Adrian J.

ITLE OF INVENTION: Compositions isolated from bovine

ITLE OF INVENTION: mammary gland and methods for their use.

Sequence 5672, Application US/09107532A
Patent No. 6583275
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
FITLE OF INVENTION: ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ::: :::::: ||||||| :::||||:::
